

88% use AI. 6% can show it in profit.

McKinsey put a number on it: **88%** of organizations regularly use AI, and only about **6%** can show five percent or more of real EBIT impact from it. Using AI widely and getting results from it are measured differently, and the results depend on changing how the work runs.

THE HEADLINE NUMBER McKinsey · Nov 2025

McKinsey, "The state of AI in 2025: Agents, innovation, and transformation." 1,993 respondents, 105 countries, mid-2025. 88% is up from 78% the year before. 39% attribute any EBIT impact to AI – most of that 39% mean under 5%. 61% (the complement of the 39%) report no EBIT impact at all.

READ AS
~~The AI rollout worked.~~

ACTUALLY
The impact needed the process rebuilt.

THREE NUMBERS UNDER THE 88% the same McKinsey survey

- I

"Any impact" is a low bar
39% claim it. Most mean under 5%.
 - Most of that 39% say AI is worth less than 5% of their organization's EBIT.
- 2

"High performer" is the real bar
About 6% clear 5%+ of EBIT.
 - The number a CFO would actually call a result.
- 3

Scaling stalls mid-funnel
A third started scaling. 7% finished.
 - Nearly everyone adopts it, and 7% ever scale it fully.

THE DIVIDE two of the five layers turn usage into impact

Adoption needs Governance and Clean Data: a license and a login. Impact shows up only once **Standardized Processes** and the **Operating Model**, highlighted above, change.

Monday morning

YOUR FIRST MOVE

Take the AI use case your team is proudest of, the one that is green on the adoption dashboard, and ask which **process step it removed** entirely. Then ask who, **by name**, owns keeping it working next quarter.

Self-check: if finance asked what changed in cycle time or headcount, could you show them a number? If all you have is a login count, that's the gap this report measured.

OPERATOR INSIGHT · EPISODE 7

"Adoption is a headcount number. Impact is an operating number. Nobody ever got the second by growing the first."

"Your AI maturity will never exceed your operational maturity."
