

Score each AI idea on six questions

Six questions, scored Clear, Fixable, or Blocked, testing the same five layers of AI-ready operations. Never average them – **one Blocked dimension parks the whole use case**, no matter how good the rest look.

THE SIX QUESTIONS clear · fixable · blocked

1
VALUE
What gets better if it works, and by how much.

2
VOLUME
Happens constantly, or happened once, memorably.

3
DATA READINESS
The specific fields it reads – trusted, or not.

4
PROCESS STANDARD
Same way every time, or depends who's covering.

5
BLAST RADIUS
What breaks if it's wrong, and can you catch it first.

6
OWNERSHIP
Who answers for it in a year, which may not be who built it.

Value and volume together test Layer 1, Governance – is this worth a decision at all. The rest map one to one: data readiness is Layer 2, process is Layer 3, blast radius is Layer 4, ownership is Layer 5.

THREE CASES, SAME GATE one deciding dimension each

GO
Support ticket drafting
Clear on all six.

PILOT
Invoice coding
Two Fixable, same root cause. Scope to what's clean.

PARK
Performance review drafting
Blocked on blast radius and ownership, so it waits until those are fixed.

The room liked the PARK case most, and it was parked anyway, for an organizational reason that had nothing to do with the writing.

MONDAY MORNING one page, six boxes

Run it **YOUR TEAM'S FAVORITE IDEA**

Take the AI idea your team is currently most excited about, and write the six questions across the top of a page. Score each one **Clear, Fixable, or Blocked**, and score it honestly.

One Blocked box, especially on blast radius or ownership, names the one thing that has to become true before it comes back.

OPERATOR INSIGHT · EPISODE 8

"Most AI use cases do not fail the gate. They were never taken to one."

"Your AI maturity will never exceed your operational maturity."
